

**Amendments to the Specification:**

**Please replace the paragraph beginning on line 9 of page 9 with the following amended paragraph:**

The collector 7 12 can be made of a carbon brush or be shaped as a brush or a spring-loaded shoe and be made of for example graphite, bronze, brass or carbon fibre.

**Please replace the paragraph beginning on line 13 of page 9 with the following amended paragraph:**

According to an alternative embodiment of an arrangement as herein described, the entire arrangement can be reversed so that the collector shoe ~~17~~ 12 and the spark gap member 11 are mounted on the blade, and the contact member 7 is mounted on the rotor hub. Thus, the contact member 7 can be shaped as a curved rail extending parallel to and at a distance from the surface of the blade root. Furthermore, the arrangement can function as both an inner solution where the entire equipment is mounted inside the blade and the rotor hub, or on the outer face of said blade and the rotor hub as described above.
